

# **Factom Authority Node Operator Committees**

## **ANO Contributions Working Group**

Monthly Report: July 2018

### Overview

The ANO Contributions Working Group started out strong with lively discussions about how to create a proper system of checks-and-balances as well as how to properly incentivize ANOs. Below is a high-level glance of various topics discussed:

- Node Stability Scoring
- Weighted Efficiency Variable
- ANO Pledge Tracking
- Various Incentive Structure for ANOs

The focus of our various discussions revolve around general principles we should strive for rather than specific rules. It is too early to propose specific policies and we need legal guidance regarding what we can and cannot do from a liability standpoint. At the moment, we are waiting for the legal committee to provide guidance, which is contingent on the grant funds being released.
