

# DECENTRIQ

Decentriq fundamentally believes in the impact of distributed ledger technologies. To unlock this potential, traditional centralised and emerging decentralised players have to cooperate.

Hence, our core focus is to combine the best of established financial service providers and the distributed ledger ecosystem. In the last

year Decentriq successfully built bridges between traditional Swiss private banks, progressive financial benchmark providers, traditional commodity traders and highly scalable blockchain payment solutions:

As a AML/KYC regulated financial intermediary Decentriq offers sophisticated brokerage services to clients and serve as a liquidity provider for corporate entities. Due to our market access and trading infrastructure Decentriq is able to trade a variety of cryptographic assets as well as FIAT currencies. Clients hereby get convenient and secure access to high volume trades with Decentriq as the only counterparty which mitigates legal and financial risks.

Besides providing OTC access to trading cryptographic assets, Decentriq also combines its expertise in Technology and Financial Services to serve clients as an Asset Manager offering both customized and standardized solutions:

For customized solutions tailored to the needs of our clients we offer our CCBA Wealth Manager (<https://www.ccba.ch/wealthmanagement>). This product includes an actively managed portfolio of cryptographic assets with regular rebalancing, risk monitoring and reporting. Upon request, we can also enable investors' access to non-publicly traded assets.

Furthermore standardized products enable a large pool of clients to conveniently invest in actively managed cryptographic asset portfolios with a high degree of liquidity. Decentriq is proud to be named Asset Advisor for the first exchange-traded financial products, offering a liquid access to cryptographic assets: Blockchain Technologies Note (DE000A19VT92) and CryptoCurrency Market Note (MT0001381228). These tracker certificates facilitate participation in an underlying instrument's performance in a transparent way. We primarily invest in cryptographic, distributed assets and gives access to this portfolio through a single transaction.
