

## Introduce your Entity/Company

---

**The Factoid Authority (TFA)** presents the following application to operate as many Authority Servers as required in support of the Factom Protocol.

In late 2017, having met through Factom community channels and sharing a common goal, we decided to form **The Factoid Authority (TFA)** with the object to support and further the Factom protocol. TFA's members have all been long-time supporters of Factom, adding value in varying capacities including;

- Factom core development
- Factom-related development
- Contributions to MFW & Ledger support
- Community Test-net management
- Community Test-net development & debugging
- Community participation & support
- Slack & Discord moderation

### **TFA is positioned to translate server revenue into protocol value.**

Our vision: *"To hash **everything**, bit by bit."*

TFA's mandate is to create never-ending value for the Factom protocol; by pledging Authority Server rewards and increasing capacity through grants, TFA will ensure that the protocol is better known, more usable and more used. TFA will be a leading organization in the blockchain space and innovation of the Factom protocol will be its motivation.

We are campaigning to host our Authority Servers in support of the Factom protocol, with the intention of contributing to the Factom eco-system as a for-profit company. We want to build a Factom-focused software company, developing useful Factom-related apps and services, while continuing to contribute to core development.

Our vision translates literally as: *"To hash every single bit (pun intended) of the world's data"* - an intentionally ambitious goal as we will seek ways to bridge development gaps, lay foundations and attract third-party developers to the Factom protocol.

Contributions will be funded largely through the Factom grant system, but also through our own in-house efforts. Additionally, we will leverage our experience to support a smooth transition into decentralization as we believe the protocol will need some nurturing in its infancy.

We also intend to provide the protocol with any number of stable, non-cloud servers to provide hosting decentralization. Our system admins have extensive experience in maintaining servers for mission critical services & enterprise-level clients, requiring no compromise of uptime. Furthermore, implementation of the Community Test-net and contributions towards hotfixes and debugging gives us a further level of insight into the protocol itself. We have both the expertise and finances to host any number of servers worldwide as necessary.

**The Factoid Authority (TFA)** is currently operating under **Logic Ethos Ltd**, a UK based private limited company. Logic Ethos has been providing mission critical software, hosting, GPS tracking and communications to the UK's vehicle breakdown operators since 2009 and boasts 100% up time for 9 continuous years. Logic Ethos has also been involved in the cryptocurrency space since 2013, providing software development and hardware.

**TFA** is currently in the process of incorporating as a separate entity in Singapore. Logic Ethos Ltd will provide support until **TFA** is self-sufficient.
